

EPA 12122016 Release Notes - Integration of latest DecouplingClient

EPA 12122016 Release Notes:

This release is focused on fixing issues reported in JIRA and integration of the latest ER Decoupling Client into EPA.

Software Changes:

- Integration with the latest DecouplingClient from ER Core
 - The latest Decoupling Client has some bug fixes so these are incorporated in the Client used by the EPA to make it more robust.
- Fix for ECP-17 + ECP-28 - GetTaxCode error. This is the same root cause for both these tickets in the Decoupling Client for both these tickets. The Client has been upgraded and this issue has been fixed. Also added some unit tests to cover this problem in the er-common dependency.
- Additional work was done to lean the project so that less jar dependencies are delivered. Due to using some ER Core related libs there are a myriad of transitive dependencies which are included by default which are not needed by EPA. These have been removed where possible.

Configuration Changes:

- None

Deployment Process Changes:

- None

Further Notes:

- None
