EPA 30112016 Release Notes - Integration with ER 16-8

EPA 30112016 Release Notes:

This release is focused on fixing raised tickets and in particular addressing issues integrating with ER Core 16-8 which is now available in DIT.

Software Changes:

- Fix for ECP-17 - NullPointerException during getSubscription2 operation call
- Fix for ECP-26 - InvalidClassException when integrating with ER Core 16-8. Old Ecom clients do not have the id field so we can remove it from the EPA without breaking the clients. The id field was introduced relatively recently (post ER Core 14-12)
- Fix for ECP-24 - EcomProxyLog did not output the ecom response line.
- Additional issues integrating with ER Core 16-8 have been addressed. These are listed below:
    - In particular ER Core was returning internal Hibernate objects which were breaking the Ecom Client within EPA
    - ModifyTxn did not have a serialUid in the class which threw a class version incompatibility exception in the EPA
    - There were changes to in the ER Core PricePoint object which broke the Ecom client used in the EPA. The EPA Ecom client needed modifications for compatibility to populate values.

- Integration tests were changed so that Soft Assertions are handled differently for Jenkins builds.
- Addressed a problem where some operations were not working through the Ecom api even when configured to do so.
- Better Exception logging added to library classes to locate issues for PT during testing

Configuration Changes:

- None

Deployment Process Changes:

- None

Further Notes:

- None
